

Shared Decision-Making and Cancer Screenings: Does Choice Matter?

Christine Gunn, MA
Marina Soley-Bori, MA
January 10th, 2014

Background: Screening Guidelines

- Breast cancer screening results in population mortality benefits
- Many new screening guidelines include shared decision making in recommendations
- Currently a lot of debate and discussion about the relative benefits and harms of breast cancer screening

Background: Shared Decision-Making

- Cancer screening is ideal venue for shared decision-making
- New mandate under the Affordable Care Act to use shared decision-making in clinical practice
- Elwyn and colleagues (2012) provide a model to guide shared decision making, including 3 steps:
 - Introducing a choice
 - Describing options
 - Helping explore patient preferences to reach decision

Objective

Assess the current use of shared decision-making in screening decisions from the patient perspective and its impact on utilization of breast cancer screening tests.

- 1) Measure the influence of individual characteristics and communication on patient-reported choice.
H₁: Higher levels of patient-provider communication will increase the likelihood that patients report having a choice for screening.
- 2) Determine the effect of having a choice to undergo cancer screening on utilization of mammograms.
H₂: Having a choice will decrease use of mammography.

Methods: Health Interview National Trends Survey

- HINTS 4 (Cycle 1 and Cycle 2; 2012) were used to measure utilization and choice among female respondents
- Included all people who responded to the breast cancer screening questions of interest (N=2,338)
- Weighted sample data were used in all multivariate analysis (N=127,743,755)

Methods: Statistical analyses

- **Choice model:** Logistic regression

- Dependent Variable: Choice

Has a doctor ever told you that you could choose whether or not to have the mammogram?

- **Utilization model:** Multinomial Logistic Regression

- Dependent Variable: Utilization

When did you have your most recent mammogram to check for breast cancer, if ever? (never; > 2 years; \leq 2 years)

Methods: Communication Variable

- Created a single composite measure of communication:

- Cronbach $\alpha = 0.93$

- Scale range: 7 – 28

C6. The following questions are about your communication with all doctors, nurses, or other health professionals you saw during the past 12 months...

How often did they do each of the following:

	Always	Usually	Sometimes	Never
a. Give you the chance to ask all the health-related questions you had?.....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b. Give the attention you needed to your feelings and emotions?.....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c. Involve you in decisions about your health care as much as you wanted?.....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d. Make sure you understood the things you needed to do to take care of your health?.....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e. Explain things in a way you could understand?.....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f. Spend enough time with you?.....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
g. Help you deal with feelings of uncertainty about your health or health care?.....	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Results: Population Characteristics

Variable	Percent (SD)
Age	Mean: 45 (0.77)
Health insurance: Yes	89% (1.21)
Most recent Mammogram	
Less than 2 years ago	51% (1.17)
More than 2 years ago	11% (1.45)
Never	38% (2.04)
Choice for Mammogram: Yes	35% (1.64)
Communication	Mean: 23.1 (0.19)

Choice Model

- **Dependent Variable: Choice**

Has a doctor ever told you that you could choose whether or not to have the mammogram?

(reference category = no)

- **Key Independent Variable: Communication**

Other controls: age, gender, race, education, income, general health status, personal history of cancer, family history of cancer regular provider, and data cycle.

Results: Choice Model

Communication did not impact whether women reported having a choice to get a mammogram

Odds Ratio= 1.017

95% CI: 0.986, 1.049

Results: Choice Model

Significant Predictors:

- Age
- Regular Provider
- Health Status

Model c-statistic: 0.6

Utilization model

- **Dependent Variable: Utilization**

When did you have your most recent mammogram to check for breast cancer, if ever?
(reference category = never)

- **Key Independent Variable: Choice**

Has a doctor ever told you that you could choose whether or not to have the mammogram?

Other controls: age, gender, race, education, income, general health status, personal history of cancer, family history of cancer, regular provider, communication, and data cycle.

Results: Utilization Model

Reported choice increased the odds of having a mammogram

$$OR_{< 2 \text{ YEARS}} = \mathbf{2.42}$$

$$95\% \text{ CI: } 1.35\text{-}4.37$$

$$OR_{> 2 \text{ YEARS}} = \mathbf{3.76}$$

$$95\% \text{ CI: } 2.07\text{-}6.81$$

Results: Utilization Model

Other Significant Predictors:

- Age
- Race
- Regular Provider
- Education
- Marital Status

Model c-statistic: 0.92

Limitations

- Survey questions did not pertain to individual encounters
- Missing values could not be imputed
- Patient-reported outcomes only

Conclusions

- Choice increased use of mammograms
- Low overall rates of shared decision-making, represented by 'choice'
- Communication did not influence patient-reported choice

Implications

- Shared decision making in this setting may be challenging and innovative approaches are needed
- The ACA advocates for the use of decision aids to promote information and preference sharing
 - Need for decision aids that incorporate **both** informational aspects and elicit patient preferences to guide patient-provider discussions
